

MUHAMMAD HAIM

QUALITY ENGINEER | SENIOR QA | TEST AUTOMATION | API & PERFORMANCE

Islamabad, Pakistan • +92 332 6009541 • muhammadhaim0786@gmail.com • LinkedIn

PROFESSIONAL SUMMARY

Quality Engineer / Senior QA with 4+ years of experience across healthcare, enterprise, government, gaming, and business applications. Experienced in establishing QA processes, designing risk-based test strategies, managing defect lifecycles, and building layered automation across UI, API, database, component, and full-stack browser layers. Strong hands-on background with Playwright, Java, TypeScript, REST APIs, SQL, and Apache JMeter, with a focus on cross-layer verification, release quality, and identifying systemic engineering risks early in the development lifecycle.

CORE EXPERTISE

Quality Engineering	QA Process Design • Test Strategy • Risk-Based Testing • Exploratory Testing • Release Readiness • Defect Triage
Automation	Playwright • TypeScript • Java • Page Object Model • UI • API • Component • Full-Stack Browser Testing
Backend & Data	REST APIs • API Contract Testing • JSON • HTTP • Backend Logs • SQL • Database / Persistence Validation
Performance	Apache JMeter • Load • Stress • Endurance Testing • Bottleneck Identification
Delivery	PR Quality Reviews • Regression • Integration • UAT • Smoke • Sanity • CI/CD • Agile / Scrum
Tools	Linear • Jira • TestRail • AIO Test • Postman • Git • GitHub • GitHub Actions • Confluence

PROFESSIONAL EXPERIENCE

Oasys Quality Engineer	Aug 2026 – Present New York, NY • Remote
- Designed and documented the company's first formal QA process, covering test strategy, layered coverage taxonomy, per-PR manual test plans, exploratory testing, standardized defect intake, and triage. - File and triage 30+ defects per month across eight product domains, with the majority High priority and supported by reproducible steps and cross-layer evidence. - Run cross-layer verification on every release candidate across browser UI, backend logs, database state, and external integrations including payments, calendar, and messaging providers. - Identify session-integrity and permissions defects in authenticated healthcare workflows, including cases where UI access controls behaved correctly while API or persistence-layer behavior did not. - Build automated coverage across unit, API contract, database integration, component, and full-stack browser layers, selecting the layer that owns each behavior rather than duplicating coverage. - Review PRs for systemic quality risks beyond functional correctness, including N+1 query patterns, client-side filtering that should be server-side, response schema mismatches, and incomplete cache invalidation. - Own the defect lifecycle end to end in Linear, consolidating QA findings, customer reports, and stage testing into a single triage pipeline with consistent priority, domain, and ownership. - Publish a weekly QA digest giving engineering and product a shared view of quality trends, open risks, and defect patterns.	
Motive Software Engineer – QA (Manual & Automation)	Sep 2025 – Aug 2026 New York, NY • Remote
- Designed, developed, and maintained automated UI test coverage using Playwright with Java, improving regression efficiency and test reliability. - Enhanced the automation framework using Page Object Model architecture to improve maintainability and reuse. - Increased regression coverage while reducing execution time by approximately 30–50% through automation and suite optimization. - Performed REST API testing using Postman to validate requests, responses, business logic, and integration behavior. - Conducted performance and load testing using Apache JMeter to identify bottlenecks and stability risks. - Integrated automated test suites into CI/CD pipelines for faster feedback during development. - Executed regression and release validation cycles and collaborated with engineering and product teams to investigate defects and maintain release quality. - Maintained test plans, test cases, and defect reports using Jira and TestRail.	
AZM Development Test Automation Engineer	Mar 2024 – Sep 2025 Islamabad, Pakistan
- Led QA automation for SASO HERC, a Saudi government digital compliance platform. - Designed and implemented a scalable Playwright + TypeScript automation framework using Page Object Model architecture. - Reduced manual regression effort by 60%+ through reusable automated coverage and framework improvements. - Developed reusable automation components that improved test maintainability and execution reliability. - Performed API validation and performance testing to verify system behavior and compliance requirements. - Created and maintained test scenarios aligned with Jira stories, business requirements, and Figma designs. - Supported release readiness, regression cycles, and defect investigation across application workflows. - Mentored two junior QA engineers on automation practices, framework architecture, and maintainable test development.	

weRplay

Quality Assurance Analyst

May 2023 – Mar 2024

Islamabad, Pakistan

- Executed 200+ functional and regression test cases across iOS, Android, Kindle, and Web platforms.
- Identified and logged 150+ defects, contributing to a reported 40% reduction in post-release issues.
- Created detailed test scenarios from product requirements to improve validation coverage.
- Performed backend and data validation using SQL queries to verify application state and data integrity.
- Participated in risk assessment, release validation, regression, and defect verification activities.

Care Pvt Ltd

Implementation Engineer

Aug 2022 – Jun 2023

Islamabad, Pakistan

- Developed and configured ERP workflows and features using the Joget low-code platform within a Scrum environment.
- Created and executed manual test cases for ERP modules using Postman and regression testing techniques.
- Performed system and integration testing with request/response validation against client requirements.
- Identified critical defects and supported UAT readiness and successful client acceptance.
- Used Git for version control and collaborated with cross-functional teams throughout implementation and testing.

SELECTED PROJECTS

SASO HERC — Automation Framework | Playwright • TypeScript • POM

Built a scalable Playwright automation framework with reusable components and Page Object Model architecture, reducing regression effort by approximately 60%.

SASO HERC — API Performance Testing | Apache JMeter • REST APIs

Designed JMeter test plans simulating 1,000+ concurrent users, identified performance bottlenecks, and proposed optimizations for response time and stability.

EDUCATION

National University of Computer and Emerging Sciences (FAST-NUCES) — Bachelor of Science, Computer Science | 2022

CERTIFICATIONS

- Automation Testing Using Playwright — Udemy
- Performance Testing Fundamentals — Udemy
